NF1 occurs in 1 in 2,500 births

NF1 refers to neurofibromatosis Type 1
NF1 is a genetic condition that causes tumors to grow on nerves

NF1 affects all populations, genders & ethnicities equally

NF1 is characterized by café-au-lait (light brown) spots, and neurofibromas (small benign tumors) on or under the skin.

YOU CAN’T CATCH NF1, you are born with it.

NF1 is most often diagnosed in childhood.

ABOUT 50% of individuals with NF1 have learning disabilities.

You can’t catch NF1, you are born with it.

NF1 is a genetic condition that causes tumors to grow on nerves.

NF1 affects all populations, genders & ethnicities equally.

NF1 is characterized by café-au-lait (light brown) spots, and neurofibromas (small benign tumors) on or under the skin.
