Moxie and Sparx introduce the Accelerator!

Maria, you look scared. What’s going on?

I’ve got NF, which is short for Neurofibromatosis.

Can’t your doctor give you some medicine?

There isn’t any, and it takes so long for scientists to develop new medicines.

Don’t worry, CTF has the answer. Meet the Accelerator!

Maria, you look relieved. Thanks to the Accelerator!

Just doing my job, busting barriers and speeding the way to treatments for NF.

CTF.org and Synodos is a team of researchers that work together.

And you can help speed the process too, by joining the NF Registry. It helps researchers learn more about NF and matches patients to clinical trials.

There are even more CTF tools that speed the process, like animal models, and cell lines, and even a tissue bank for testing.

And you can help speed the process too, by joining the NF Registry. It helps researchers learn more about NF and matches patients to clinical trials.

Children’s Tumor Foundation ending NF through research
