NF affects all populations, genders & ethnicities equally.

There are 3 types of NF:
NF1, NF2, AND SCHWANNOMATOSIS

NF affects everyone differently.
It causes tumors to grow on nerves throughout the body and may lead to blindness, deafness, bone abnormalities, disfigurement, learning disabilities, disabling pain, and cancer.

There is no cure...yet.

You can’t catch NF – You’re born with it.

Go to CTF.org to learn more.

Children’s Tumor Foundation
Ending NF through research.
